

Help Sheet

How to clean and prepare glass and other surfaces for installing self adhesive vinyl.

"This sheet is intended to help you clean and prepare surfaces prior to installation of self adhesive vinyl and on-going care of your print — it could save you time and money!"

Cleaning and surface preparation

For cleaning glass we suggest using metholated spirits and a micro fibre cloth available from Supa Cheap Auto.

To remove any glue from surfaces prior to installation use "Avery Glue Remover". After removing glue and other marks then we advise that you use "Avery Surface Cleaner", both products are available from Kawana Signs.

Cleaning your self adhesive vinyl

A damp cloth or soapy water will clean general dust or dirt off the graphics without leaving a film or residue.

Always try any cleaning product first in a small corner of the graphics to make absolutely sure that no damage occurs prior to more general use.

After using any cleaning product wipe the graphics again with a damp clean cloth.

Never ever use bleach, Jiff or Ajax or any slightly abrasive product as they may damage and scratch the surface of the graphics.
